

UPSC 2031 MENTORSHIP PROGRAM

Not a race. A depth-first launchpad.

The earliest possible start — depth first, pace second. Best for: Very early starters — those beginning years ahead of their target attempt, prioritizing depth over speed.

LAUNCHPAD 2031

AI-POWERED DASHBOARD

100 PRELIMS TESTS

17

Subjects mapped & tagged across GS1-GS4, with 209 topics structured

5

Distinct mains cohorts — GS Answer Writing, Essay, Ethics, CSAT & Qualifying Papers

5

Mock interviews per student — 2 in-house, 3 with retired IAS/IPS officers

OUR CORE BELIEF

The mentor is one part of the system. The system is what actually prepares the student.

An AI-powered dashboard, playbooks, a tagged content bank, a fixed testing cadence, and audited SOPs work together — so the quality of your preparation never depends on which individual mentor you were assigned.

"Every mentor tells me something different."

Quality varies by whoever you were assigned — nothing is standardized across mentors. We fix this with one written SOP for every mentor.

"I don't know if I'm actually on track."

No structured tracking of study hours, tests, or the real reasons behind a bad week. We track both the preparation and the person.

"Current affairs pile up until it's unmanageable."

Left as an afterthought instead of a daily habit from day one. We run two current-affairs lanes from day one.

"Nobody diagnosed where I actually stand."

Everyone gets the same generic starting point regardless of real preparation level. We diagnose before we teach a single topic.

THE MENTORSAILY SYSTEM

One lifecycle. Every student travels through the same stages.

Personalized pacing, identical structure — so nothing gets skipped and nothing depends on luck.

"Every student — fast batch or slow batch — moves through the exact same lifecycle, audited the exact same way. Pace changes. The stages, the standard, and the SOP never do."

— TEAM MENTORSAILY

A diagnostic observation period — not a sales pitch to start classes

Your mentor observes before mentoring. Four scored tasks build your Student Blueprint, graded against a fixed rubric — not mentor opinion.

1

Exam structure

Notification, timelines, and how prelims, mains, and interview actually connect.

2

Syllabus decoding

Every syllabus line broken into a diagram against a master reference — reading isn't understanding.

3

5-year PYQ analysis

Subject → topic → subtopic → dimension → directive → static or dynamic, tagged against our master PYQ bank.

4

Micro-diagnostic

A short, unseen topic and test — the real signal for how fast you actually learn and retain.

BUILT, NOT PROMISED

A completed notes repository, built from the same tagging system your mentor uses

Every topic across all 17 subjects is priority-tagged, split by prelims and mains relevance, and time-estimated — the same master reference your mentor uses to keep grading and guidance consistent. Current affairs is the next section being built into it.

DIAGNOSE

ROADMAP

TEACH

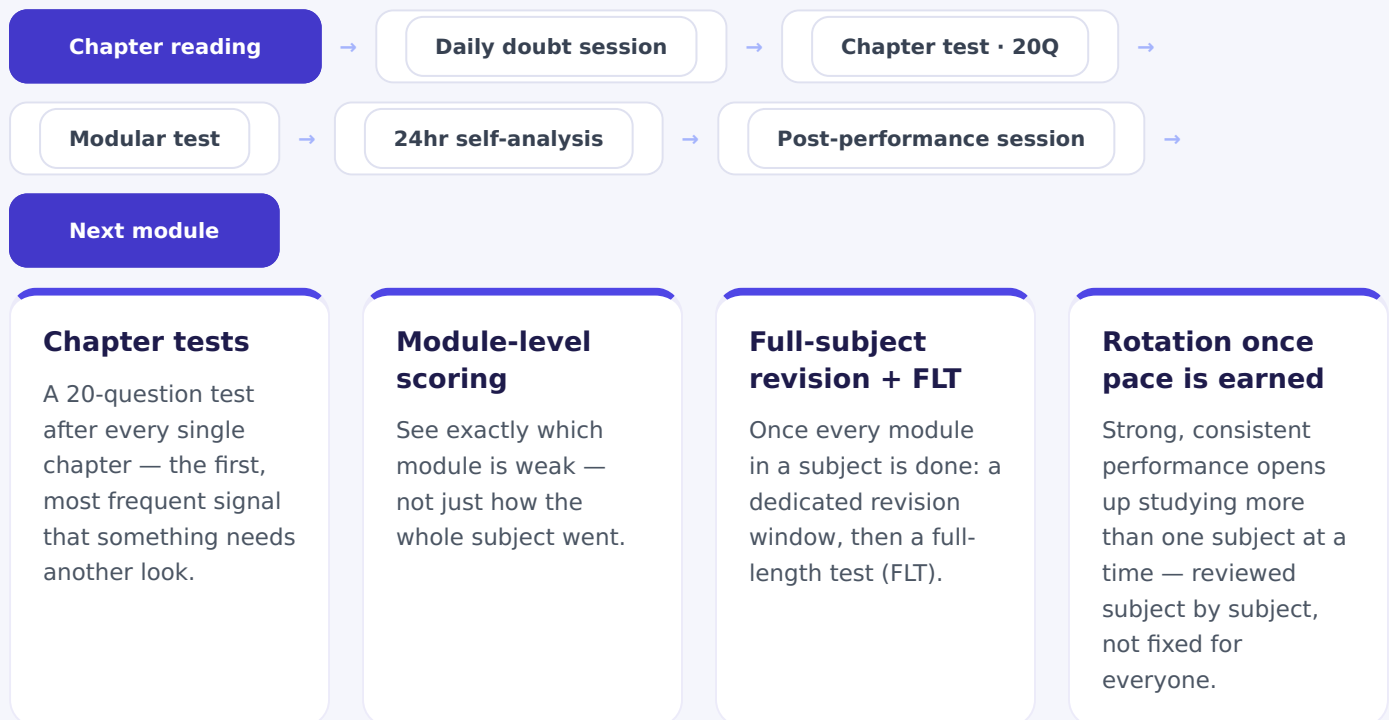

TEST & TRACK

"Reading the syllabus and understanding it are two different skills. Our diagnostic period exists to build the second one — before a single class begins."

— TEAM MENTORSAILY

Every subject runs the same proven loop

Subjects are broken into modules of a few chapters each, drawing on NCERTs, standard reference books, and our notes repository together — whichever source covers that part of the syllabus best.

FOUR TESTING LAYERS, EVERY SUBJECT

CURRENT AFFAIRS, FROM DAY ONE

Two lanes, so momentum builds steadily toward prelims

Lane 1 · Mains current affairs

Analytical, opinion-linked, daily from day one — built into daily sessions alongside the module you're studying, so it compounds into your mains answer writing all year.

Lane 2 · Prelims current affairs

Factual, scheme- and event-based — light daily touch, full focus once the Prelims Focus Batch begins.

"Chapter tests, modular tests, subject FLTs — four testing layers on the same subject mean a weak spot is caught at the chapter level, not discovered for the first time on exam day."

— TEAM MENTORS DAILY

Not one generic "answer writing course" — five distinct tracks

Each skill develops differently, so each gets its own cohort, cadence, and evaluation.

GS Answer Writing Review-first, no marks until confidence is built — then full evaluation.	Essay Structuring abstract themes — a distinct muscle from GS writing.	Ethics Applied, case-study reasoning for GS-IV.	CSAT Tracked against the qualifying threshold, not folded anonymously into GS practice.	Qualifying Language Papers Focused prep for English and Hindi/ regional-language qualifying papers — must-clear papers, given dedicated attention.
---	---	--	--	---

MENTOR QUALITY, AT THE SYSTEM LEVEL

Every mentor follows the same SOP — so quality doesn't depend on who you get

Experienced by design The large majority of mentors have appeared for the interview stage or have comparable multi-attempt experience.	Standardized, not improvised Every stage — first call, diagnostic, weekly review, escalation — runs off a written SOP, graded against shared rubrics.	Audited weekly Mentor sessions are reviewed against real records, not self-written summaries — so standards hold across every mentor.
---	--	--

L1 · SHADOW	L2 · CO-MENTOR	L3 · SOLO, AUDITED	L4 · SENIOR MENTOR
-------------	----------------	--------------------	--------------------

"A mentor's own attempt history tells you their experience. Our SOP is what tells you every student gets that experience delivered the same disciplined way — regardless of which mentor they're assigned."

— TEAM MENTORSAILY

How the Launchpad 2031 batch is paced

Launchpad 2031

The earliest possible start — depth first, pace second.

1. Extended foundation phase — reading habits, note-making systems, and basic conceptual clarity built before any module begins.
2. Gradual, low-pressure module ramp-up, with subjects introduced one at a time and extra time built into each module.
3. Full exposure to the testing cascade at an easier pace — daily practice and chapter tests introduced early, modular and subject tests phased in gradually.
4. A deliberate, unhurried transition into the Prelims Focus Batch once foundation and pacing are fully established.

Best for: Very early starters — those beginning years ahead of their target attempt, prioritizing depth over speed.

PHASE BY PHASE

The Launchpad 2031 batch, broken into four phases

PHASE 1

Extended foundation phase — reading habits, note-making systems, and basic conceptual clarity built before any module begins.

PHASE 2

Gradual, low-pressure module ramp-up, with subjects introduced one at a time and extra time built into each module.

PHASE 3

Full exposure to the testing cascade at an easier pace — daily practice and chapter tests introduced early, modular and subject tests phased in gradually.

PHASE 4

A deliberate, unhurried transition into the Prelims Focus Batch once foundation and pacing are fully established.

Same system every year — this batch is paced specifically for where launchpad-batch students are starting from. The core lifecycle, module loop, testing cascade, mains cohorts, and interview process are identical across every MentorsDaily batch; only the pacing changes.

MAINS COHORTS

PRELIMS FOCUS

INTERVIEW

"We didn't build five different programs. We built one system and five different clocks — because the right pace for a launchpad-batch student is rarely the right pace for anyone else."

— TEAM MENTORSAILY

The Prelims Focus Batch

Once the integrated phase ends, the entire program sharpens focus onto exactly what prelims rewards.

Targeted, prioritized topics

Focused on the themes and areas UPSC has consistently tested, rather than the full mains-depth syllabus.

100 tests, one goal

Short tests, full-length tests, current-affairs tests, subject tests, GS and CSAT — every test followed by mandatory analysis.

Daily dashboard practice

Log any topic or subtopic you studied — the AI-powered dashboard generates prelims-style questions against it, same day.

AFTER CLEARING PRELIMS

The Mains Focus Batch — residential, Noida

Roughly 90 days of concentrated, group-based mains preparation before the exam.

Group-based mentoring

Small groups, not a lecture hall — close, day-to-day academic support through the final stretch.

Mains test series & practice

Full-length mains papers plus daily practice questions across GS, essay, and ethics.

Current affairs catch-up

Anything not yet covered from January through prelims gets closed out here.

DAF preparation

Structured help completing your Detailed Application Form — the basis of your eventual interview.

"The final 90 days are the least appropriate time to switch to distance learning. Same mentor, same room, same rigor — no gap between prelims and the mains exam."

— TEAM MENTORSAILY

FINAL STAGE

Five mock interviews, built on your own DAF

Two in-house mocks

Focused on structure, composure, and DAF-based anticipation.

Three panels with retired officers

Retired IAS, IPS, and other bureaucrats bring real board-style scrutiny before the actual interview.

EVERY SINGLE DAY

The AI-powered dashboard tracks the preparation — and the person

A student who's falling behind is rarely just "not studying enough." One dashboard tracks both sides, so the real cause gets found and worked on, not guessed at.

Study pattern

Subject, topic, hours, tests cleared, newspaper, notes made.

Auto-generated practice

Log any topic you studied — the dashboard generates practice questions against it, same day.

Test score history

Chapter tests, modular tests, and subject FLTs all in one place — trends by chapter and module, not just an overall score.

Wellbeing

Mood, sleep, energy, stress — logged daily, reviewed by your mentor.

OUR COMMITMENT

If your attempt doesn't go through, you don't start over alone

Students who complete their enrolled year and don't clear the exam are supported for an additional attempt. Exact terms and eligibility are confirmed in writing at enrollment — ask your counsellor for the full policy before you join.

"By the interview stage, we're not meeting the student for the first time — the dashboard already knows their study pattern, their test trends, and their wellbeing history. The mock panels build on that, not from scratch."

— TEAM MENTORSAILY

Start with a diagnostic call, not a sales call

You're booking a diagnostic call for the Launchpad 2031 batch — not a sales call, a real assessment of where you stand.

UPSC 2031 Mentorship Program

LAUNCHPAD 2031

Pricing for the Launchpad 2031 batch. Final pricing and EMI options shown after your diagnostic call.

- ✓ First-connect call + mentor assignment
- ✓ Full diagnostic observation period
- ✓ Personalized roadmap across every subject
- ✓ Notes repository + AI-powered dashboard access
- ✓ All five mains skill cohorts
- ✓ Prelims test series through to interview mentoring
